Corporate Profile

Genic DataManager — The Optimal Solution

Genic DataManager offers the next generation of architectural flexibility for managing all types of data. It is an integrated, model-driven and flexible software platform that adapts to your business requirements, allowing access to the full range of critical business information and complex analytics.

Genic DataManager encompasses end-to-end data management processes and workflow, offering comprehensive data management capabilities - including data acquisition, normalisation, validation, source consolidation, cleansing, enhancement and distribution - and ensuring maximum automation while allowing manual intervention.

Flexible Deployment Options

DataGenic supports a range of implementation options to meet your business needs - including high availability remotely hosted software - and can offer hybrid solutions that combine elements of software-only, business process outsourcing and 24/7 managed services. Thus delivering a solution that is flexible and extensible to meet your organisation's future business challenges.

Transforming your data into a strategic asset

Strategic business decisions are only as good as the data that drives them. Through effective data management processes and technology, you can improve the quality of your data assets.

Genic DataManager provides the tools and framework to inspect data for anomalies, cleanse and standardize information, integrate data across sources and enhance information to add value to your data.

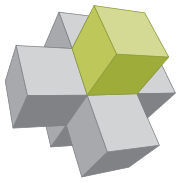

With unified views of key shared data that are reliable, timely and complete, companies can finally benefit from all of their data assets within operational business processes.

Leverage the power of Genic DataManager to make your data a strategic asset and increase the value of your information.

Extensive Data Expertise

DataGenic focuses exclusively on providing data management solutions. Our team has unique in-depth knowledge and understanding of time-series, reference and other data required in today's financial and energy institutions.

Our solutions have been developed by people with the skill and expertise to take a complex data management problem and solve it in a simple and effective way. This results in a transparent framework for the efficient management of your data.

Utilities

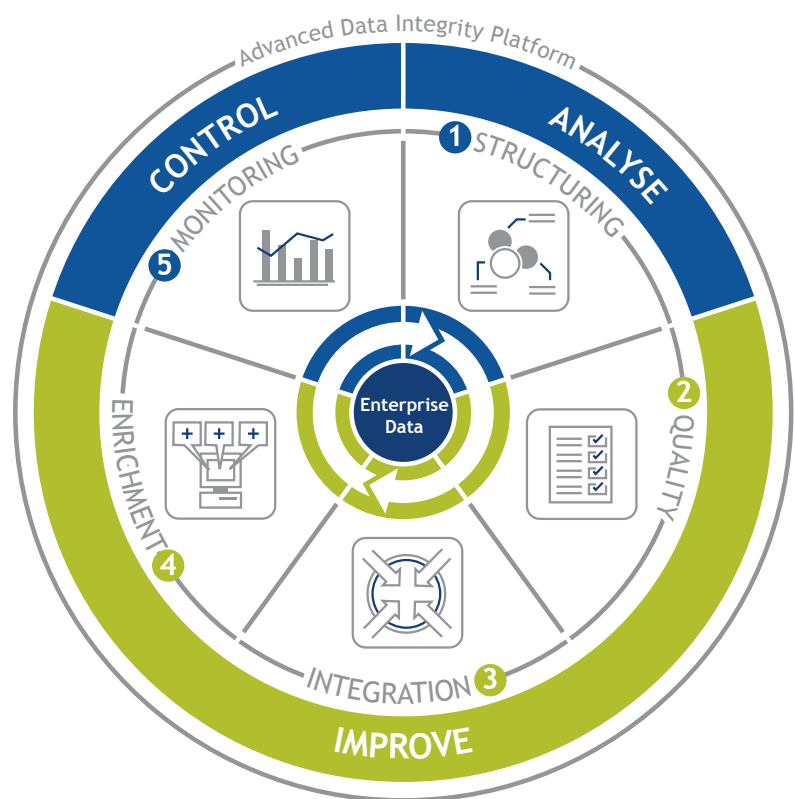

DataGenic solutions enable a painless integration path with existing systems, whilst offering flexibility and scalability for future business growth. Offering the next generation of architectural flexibility, DataGenic solutions enable faster and efficient processing of an unprecedented volume of data. These include interval reads, forecasting, fundamentals, weather, market pricing, system operator, event, documents, spatial and operational data.

Energy

DataGenic solutions allow you the flexibility to tightly integrate information from disparate sources across different timeframes to fulfil the obligations of the company's operational needs and user activities. All energy market participating company data is supported, including energy market assessments, broker forwards, foreign exchange, commodities exchanges, energy derivatives, fundamentals, weather, operational, volatility curves, documents, internal forward prices and financial data.

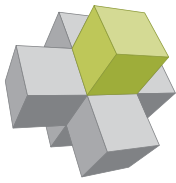

Finance

DataGenic Solutions ensure you have the control, capability and flexibility to meet the cdata management challenges required of structuring, quality, integration, enrichment and monitoring – whilst ensuring rapid integration with external data sources. Additionally, there is 'out-of-the-box' support for European and US regulations that helps to ensure an effective internal control environment and meet compliance mandates such as SOX, COBIT, Basel II and MiFID continuously

Public Sector

DataGenic solutions provide a flexible data model, open architecture and powerful decision support applications, providing the optimal environment for your economic, financial, survey, events, fundamentals and statistical data. For clients with existing SunGard FAME installations, you can effortlessly work with FAME data, gaining all the benefits without losing your current SunGard FAME investment.
