

QUICK FACTS

KEY BENEFITS:

- Data On Demand
- Reliable
- Highly available
- Fully managed
- Inexpensive
- Flexible options

KEY FEATURES:

Business Responsive Service

- Data snapshots
- Pub/Sub architecture
- Real-time API
- Real-time monitoring
- Self-service interface

// Redefining data delivery through a cloud on-demand service at a fraction of the cost of traditional data capture processing. //

Colin Hartley, CTO, DataGenic

Genic DataService™

SELF SERVICE DATA

REAL-TIME, SNAPSHOT & HISTORICAL DATA

Fast, reliable, scalable and fully managed data service to access real-time pricing and point-in-time snapshots, in multiple formats and delivery options.

Genic DataService™ can meet back and middle office requirements for portfolio management, custody services, analysis and research, clearing and settlement, fund management, compliance reporting and risk management.

Multi-Asset - Covering the world's leading exchanges in Energy, Commodities and FX

Streaming - Low latency tick-by-tick real-time feed

Snapshot - Point-in-time snapshot of data by the minute, hour and day

Historical Data - Full data history and historical snapshots

Forward Curves - Real-time, snapshot & historical forward curves

AT A GLANCE

HIGH PERFORMANCE

Using high performance services and in-house software, data is delivered with minimal latency.

SQS FEED SERVICE

Transmit any volume of data, at any level of throughput, without losing messages.

SELF SERVICE FEEDS

Web based administration tool to create and edit feed configurations.

REAL-TIME DASHBOARDS

Live status of all data requests and historic data statistics.

API

HTML5 websockets providing request/response communication through a single socket over the web.

SNAPSHOT FREQUENCY

Snapshot your data, from 1 minute to daily frequency.

SNAPSHOT DELIVERY FORMATS

Choice of formats includes CSV, XML and JSON.

SNAPSHOT DELIVERY OPTIONS

Delivery can be immediately after the snapshot, delayed or daily.

MISSING DATA ACTION

Ensures you have snapshot data each and every time for your selected time frequency, even during low liquidity periods.

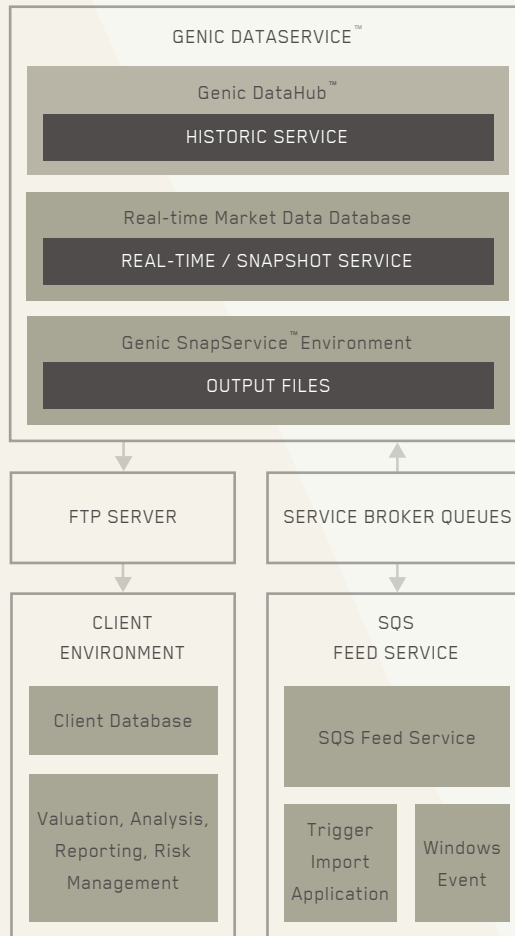

LOAD BALANCING

Segregation and management of data into different queues to ensure optimal high performance delivery.
