The automation of business processes are made easy, flexible and transparent. Monitor your workflows at every stage of the process.

Key Benefits

Enhancing Business Agility

- ✓ Improved productivity
- ✓ Workflow flexibility
- ✓ Real-time visibility
- ✓ Faster reaction to change
- ✓ Improves accountability

Key Features

Complete Process Automation

- ✓ Extensive workflow library
- ✓ Event or timed workflows
- ✓ Workflow visualisation manager
- ✓ Real-time monitoring
- ✓ Workflow cloning

Genic
WorkFlow™

Real-time, automated, interactive Complexity made simple

Today's commodity market demands that organisations can respond quickly to the changing business landscape. To ensure business success, flexibility is key. Having the right business workflow management platform in place is a vital part of the success criteria. This ensures a streamlining of processes, integration of content and empowerment of people, reducing costs, saving time, improved decision making and ensuring regulatory compliance.

Genic WorkFlow™ provides the ability to automate, manage and monitor business processes, whilst providing visibility and transparency throughout the workflow lifecycle. Mission-critical workflow processes can be supported and maintained, rolled out across the enterprise and quickly modified as processes evolve. By providing a flexible and robust framework, **Genic WorkFlow™** makes changing complex business processes easier, significantly enhancing business agility.

Workflow Designer

The visually powerful workflow designer, with drag and drop mode, allows non-technical users to quickly design simple to complex business processes. An extensive choice of design layouts, including Flow, Layered and Topological, provide additional process design clarity.

Extensible Library

An extensible and ready-to-use library of workflow components help accelerate the design and execution of all business processes. With the ability to create and deploy new custom components to the existing library, Genic WorkFlow™ offers the flexibility required in an ever-changing business environment.

Transparency & Traceability

The smart design of Genic WorkFlow™ incorporates a business process 'replay' mode, allowing a re-run of even the most interdependent and complex workflows, months or years after the event. This is a huge time and cost saver for any business.

Real-Time Monitoring

Genic WorkFlow™ supports interactive and real-time monitoring of all workflows, providing complete visibility over all current executed workflows. There is an option to review historic workflow jobs, including workflow transition paths. Full audit logs are provided for each workflow for reference and analysis.

Graphical Process Designer

Easy to use process designer with configurable icons

Integrated or Stand-Alone

Integrated with Genic DataManager™ or with your incumbent system.

Manual Intervention

Include manual steps in any of the process transitions.

Workflow Rollback

Easily rollback from a previous workflow.

Extensive Library

Access the library of common workflow actions or customise your own

Notifications

Any workflow status transitions can be notified to managers via email.

Service Orientated

Interoperable with all of the J2EE-based integration technologies including Web Services.

Workflow Tasks

Assign tasks and approvals during the workflow lifecycle.

"Genic WorkFlow automates complex business processes with ease. Simple to use, powerful and very effective."

IT Manager, Global Energy Company

About DataGenic

DataGenic is the leading global provider of on-premise and in-cloud smart commodity data management software, delivering intelligent analytics, real-time data content and proven business value. The innovative solutions include a data-agnostic multi-commodity data management platform, visual mapping and management of business processes, extensive and extensible data quality management, unlimited forward curves construction and an intelligent decision framework.
